PROFESSIONAL SUMMARY:

- Full-stack developer with experience building production-oriented AI systems that connect LLMs with databases, APIs, and user-facing workflows
- Skilled in Python, TypeScript, PostgreSQL, REST APIs, data pipelines, and full-stack application development
- Experience owning features end-to-end, translating user needs into software requirements, and delivering practical systems

EXPERIENCE:

ReliBon AI, Chino Hills - Fullstack and AI Engineer (January 2026 - Present)

- Designed PostgreSQL schemas for property listings, market data, and user-facing search workflows, creating the core data layer for the real estate platform
- Built RESTful API services for structured property search, prompt-based AI search, and market analysis, powering 3 core product features
- Integrated LLM APIs and RAG-based retrieval system to process natural-language prompts, retrieve relevant property listing data, and generate real estate AI assistant responses
- Reduced property search latency by 85% across 1M+ property listings, from 35 seconds to 5 seconds, by optimizing PostgreSQL queries and indexing strategies
- Deployed cloud-based scheduled jobs on DigitalOcean to automate data maintenance, reducing an estimated 3.5 hours per week of manual update work

California State University, Fullerton – Researcher, Computer Vision and AI (Sep 2024 – May 2026)

- Evaluated transformer-based nutrition prediction in PyTorch, comparing memory usage and prediction performance across optimization strategies
- Optimized a transformer-based nutrition prediction model, reducing VRAM usage by approximately 80% while maintaining prediction accuracy

California State University, Fullerton – Teaching Associate (Jan 2025 – May 2026)

- Mentored students with diverse technical backgrounds in Python programming, explaining data structures, object-oriented programming, debugging, and code quality concepts
- Designed coding assignments, automated unit tests, and evaluation metrics to assess correctness, efficiency, readability, and software engineering best practices

PROJECTS:

Magnakom — E-Commerce Fulfillment Integration

Backend Engineer, Paid Technical Project | July 2026

- Built a Python API integration between Temu and Sellercloud to retrieve unshipped orders, reconcile order and product identifiers, verify warehouse inventory, and determine fulfillment readiness across both platforms
- Designed the end-to-end shipment workflow covering logistics-provider selection, shipment creation, shipping-label retrieval, and order-status synchronization

Coach Scheduler App - Fullstack Developer, AI integration | Demo: coach.tien-duong.com

- Designed and built a full-stack scheduling platform using Next.js, Prisma, and PostgreSQL to manage coach availability, parent responses, scheduling decisions, revenue tracking, and invoice generation.
- Built AI-assisted automation that read email responses with LLM APIs, generated personalized coach messages, and supported auto-pilot responses on behalf of coaches

File Organizer – Document Classification Project | Demo: huggingface.co/spaces/tien98/file-organizer

- Built an LLM-powered file organization tool for accounting workflows that classifies uploaded documents such as bank statements, receipts, invoices, and tax records into organized categories
 - Designed a confidence-based human-in-the-loop review layer to flag uncertain classifications for accountant review and support future multi-step LangChain/LangGraph agents
-

PUBLICATION:

Tien Duong, et al. “VRAM Optimization for Transformers Based Nutrition Prediction Model.” Zenodo, 2026. Available: <https://zenodo.org/records/20048116>

TECHNICAL SKILLS:

- **Programming Languages:** Python, SQL, C++, JavaScript/TypeScript
 - **Backend/Data:** RESTful APIs, Flask, FastAPI, PostgreSQL, Prisma, data pipelines, webhooks, cron jobs
 - **Full-Stack Development:** React, Next.js, JavaScript/TypeScript, HTML, CSS, frontend-backend integration
 - **Testing and Engineering:** Unit testing, integration testing, debugging, Git, GitHub Actions, CI/CD
 - **AI Engineering:** LLM APIs, RAG, LangChain, LangGraph, PyTorch, TensorFlow, HuggingFace, computer vision, model inference
 - **Cloud/DevOps:** AWS, DigitalOcean, Vercel, Cloudflare
-

EDUCATION:

California State University, Fullerton – M.S. Computer Science (*3.86/4.0 GPA*)

University of California, Berkeley – B.A. Astrophysics & Applied Mathematics
